

R Basic: Functions

Caio Moreno

October 3, 2015

In this example we will see how to create a Function in R:

```
setwd("~/git/github.com/data-science/r-commands")

# An example of a Function in R
your.test.function <- function(x, y) {

  sum = y + x
  return(sum)

}

# Call your function and pass x and y to the function
sum <- your.test.function(4,2)

# print the result of sum
sum
```

```
## [1] 6
```
